Seso Hiring Team

Dear Seso Hiring Team,

Seso's mission and the Director of Revenue Operations mandate draw me in: the company is applying software and services to a consequential workforce problem, and the role calls for connecting GTM systems, reporting, handoffs, and practical AI adoption.

I build the systems behind measurable growth. At Prosper Wireless, I developed lifecycle, enablement, partner, and reporting infrastructure that supported scale from roughly \$45 million to \$120 million-plus in a sales-led environment. The systems supported more than 600,000 activations or customers and reduced agent onboarding burden by about 50 percent. My contribution was to remove friction, improve visibility, and make execution more scalable while the sales organization drove the commercial result.

At HireHawk, I led the operating build for an internal venture, including the RevOps and HRIS stack and AI-assisted recruiting workflows across profile generation, job-description creation, ATS publishing, sourcing, and screening. That work helped reduce time-to-fill from 60+ days to under 21 days. It also reinforced my view that AI creates value when it is attached to a clear workflow, a measurable constraint, and human quality control.

My deepest CRM implementation leadership has been in Zoho One and Microsoft Dynamics 365. I also bring HubSpot and Salesforce familiarity, plus hands-on work across lifecycle platforms, analytics, and automation. I have repeatedly translated fragmented business needs into connected workflows, dashboards, operating cadence, and adoption. At Seso, I would bring that systems perspective while partnering closely with the dedicated Salesforce administrator, marketing operations contractor, GTM leaders, and Finance.

I would welcome the chance to discuss the current state of Seso's GTM stack, the highest-priority reporting and handoff problems, and where the team sees the strongest near-term opportunity for responsible AI leverage.

Best,

Matt Dimock
